

# MI Profile

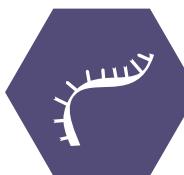

## Comprehensive Tumor Profiling

The Caris Molecular Intelligence® comprehensive tumor profiling approach to assess DNA, RNA and proteins reveals a molecular blueprint to guide more precise and individualized treatment decisions from among 60+ FDA-approved therapies.

### DNA

**Whole Exome Sequencing**  
(Mutations, Indels &  
Copy Number Alterations)

### RNA

**Whole Transcriptome Sequencing**  
(Fusions & Variant Transcripts)

### Protein

**Immunohistochemistry**

## Technical Specifications

Sufficient tumor content (>20% tumor nuclei) must be present to complete all analysis. If you have any questions, please contact Customer Support at (888) 979-8669.

| Technical Information   | IHC  | CISH   | FISH  |
|---|--|--|---|
| <b>Sample Requirements</b><br><i>(see requisition for full details)</i> | 1 unstained slide at 4µm thickness from FFPE block, with evaluable tumor present, per IHC test | 1 unstained slide at 4µm thickness from FFPE block, with at least 100 evaluable tumor cells present, per CISH test | 2 unstained slides at 4µm thickness from FFPE block, with at least 100 evaluable cells present and 10% tumor, per FISH test |
| <b>Sensitivity/Specificity</b>  | >95%   | >95%   | >95%  |

| Technical Information   | NGS (Whole Exome - DNA)  | NGS (Whole Transcriptome - RNA) |
|---|--|---------------------------------|
| <b>Sample Requirements</b>  | FFPE block or 10 unstained slides with a minimum of 20% malignant origin for DNA and 10% malignant origin for RNA.<br>Needle biopsy is also acceptable (4-6 cores).                            |                                 |
| <b>Tumor Enrichment (when necessary)</b>                            | Microdissection to isolate and increase the number of cancer cells to improve test performance and increase the chance for successful testing from small tumor samples                         |                                 |
| <b>Number of Genes</b>  | ~22,000 genes  |                                 |
| <b>Average Depth of Coverage (DNA)<br/>Average Read Count (RNA)</b> | 500x for 700+ clinical and research genes<br>and 200x for all other genes  | 60 million                      |
| <b>Positive Percent Agreement (PPA)</b>                             | > 95% for base substitutions at ≥ 5% mutant allele frequency;<br>> 99% for indels at ≥ 5% mutant allele frequency;<br>>95% for copy number alterations (amplifications ≥ 6 copies)             | >97%                            |
| <b>Negative Percent Agreement (NPA)</b>                             | >99%   | >99%                            |
| <b>Genomic Signatures</b>   | Microsatellite Instability (MSI)<br>Tumor Mutational Burden (TMB)*<br>Loss of Heterozygosity (LOH)*<br>MI FOLFOXai™* – AI predictor of FOLFOX response in metastatic colorectal adenocarcinoma | –                               |
|   | MI GPSai™* Genomic Prevalence Score – CUP, atypical presentation or clinical ambiguity cases   |                                 |

# Caris Molecular Intelligence® Associations List

The list below details the biomarkers assessed, technology platforms utilized and associated therapies or clinical trials. **Biomarkers and therapy associations may vary by the tumor type submitted.** Individual assay results are always included with the final report.

| Biomarker          | Technology/Alteration                     | Agent  |
|--------------------|---|--|
| ALK                | IHC, RNA Fusion                           | crizotinib, ceritinib, alectinib, brigatinib (NSCLC only), lorlatinib (NSCLC only)   |
|                    | DNA Mutation                              | resistance to crizotinib, alectinib  |
| AR                 | IHC                                       | bicalutamide, leuproide (salivary gland tumors only)   |
|                    |   | enzalutamide, bicalutamide (TNBC only)   |
| BRAF               | DNA Mutation                              | vemurafenib, dabrafenib, cobimetinib, trametinib   |
|                    |   | encorafenib + binimetinib (melanoma only)  |
|                    |   | dabrafenib+trametinib (anaplastic thyroid and NSCLC only)  |
|                    |   | atezolizumab + cobimetinib + vemurafenib (melanoma only)   |
|                    |   | cetuximab + encorafenib (CRC only)   |
| BRCA1/2            | DNA Mutation                              | carboplatin, cisplatin, oxaliplatin  |
|                    |   | niraparib (ovarian, prostate), olaparib (breast, cholangiocarcinoma, ovarian, pancreatic, prostate), rucaparib (ovarian, pancreatic, prostate), talazoparib (breast only), veliparib combination (pancreatic only)   |
|                    |   | resistance to olaparib, niraparib, rucaparib with reversion mutation   |
| EGFR               | DNA Mutation                              | afatinib (NSCLC only)  |
|                    |   | afatinib + cetuximab (T790M; NSCLC only)   |
|                    |   | erlotinib, gefitinib (NSCLC and CUP only)  |
|                    |   | osimertinib, dacomitinib (NSCLC only)  |
| ER                 | IHC                                       | endocrine therapies  |
|                    |   | everolimus (breast only)   |
|                    |   | palbociclib, ribociclib, abemaciclib (breast only)   |
| ERBB2 (HER2)       | IHC, CISH, DNA Mutation, CNA              | trastuzumab, lapatinib, neratinib (breast only), pertuzumab, T-DM1, fam-trastuzumab deruxtecan-nxki, tucatinib   |
|                    | DNA Mutation                              | T-DM1 (NSCLC only)   |
| ER/PR/ERBB2 (HER2) | IHC, CISH                                 | sacituzumab govitecan (TNBC only)  |
| ESR1               | DNA Mutation                              | exemestane + everolimus, fulvestrant, palbociclib combination therapy (breast only)  |
|                    |   | resistance to aromatase inhibitors (breast only)   |
| FGFR2/3            | DNA Mutation, RNA Fusion                  | erdafitinib (urothelial bladder only), pemigatinib (cholangiocarcinoma only)   |
| HRR                | DNA Mutation                              | olaparib (prostate only)   |
| IDH1               | DNA Mutation                              | temozolomide (high grade glioma only)  |
|                    |   | ivosidenib (cholangiocarcinoma and EBDA only)  |
| KIT                | DNA Mutation                              | imatinib<br>regorafenib, sunitinib (both GIST only)  |
| KRAS               | DNA Mutation                              | resistance to cetuximab, panitumumab (CRC only)  |
|                    |   | resistance to erlotinib/gefitinib (NSCLC only)   |
|                    |   | resistance to trastuzumab, lapatinib, pertuzumab (CRC only)  |
| MET                | RNA Exon Skipping, DNA Exon Skipping, CNA | capmatinib, crizotinib (both NSCLC only)   |
| MGMT               | Pyrosequencing (Methylation)              | temozolomide (high grade glioma only)  |
| MMR Deficiency     | IHC, DNA Mutation                         | pembrolizumab  |
|                    |   | pembrolizumab, nivolumab (CRC, small bowel adenocarcinoma), nivolumab+ipilimumab (CRC, small bowel adenocarcinoma)   |
| MMR Proficiency    | IHC, DNA Mutation                         | pembrolizumab + lenvatinib (endometrial only)  |
|                    |   |  |
| NRAS               | DNA Mutation                              | resistance to cetuximab, panitumumab (CRC only)  |
|                    |   | resistance to trastuzumab, lapatinib, pertuzumab (CRC only)  |
| NTRK1/2/3          | RNA Fusion                                | entrectinib, larotrectinib   |
|                    | DNA Mutation                              | resistance to larotrectinib, entrectinib   |
| PALB2              | DNA Mutation                              | olaparib (pancreatic and prostate), veliparib combination (pancreatic only)  |
| PDGFRA             | DNA Mutation                              | imatinib, avapritinib (GIST only), sunitinib   |
| PD-L1              | IHC                                       | pembrolizumab (22c3 TPS in NSCLC; 22c3 CPS in cervical, esophageal, GEJ/gastric, head & neck, urothelial and non-urothelial bladder, vulvar)<br>atezolizumab (SP142 IC urothelial bladder cancer and SP142 IC & TC NSCLC)<br>pembrolizumab + chemotherapy (22c3 CPS in TNBC only)<br>atezolizumab + nab-paclitaxel (SP142 IC in TNBC only)<br>nivolumab+ipilimumab combination (28-8 NSCLC only) |
|                    |   |  |
|                    |   |  |
|                    |   |  |
|                    |   |  |
| PIK3CA             | DNA Mutation                              | alpelisib + fulvestrant (breast only)  |
| POLE               | DNA Mutation                              | pembrolizumab (endometrial and CRC only)   |
| PR                 | IHC                                       | endocrine therapies  |
| RET                | RNA Fusion                                | cabozantinib, vandetanib, selengatinib, pralsetinib (NSCLC only)   |
|                    | DNA Mutation                              | vandetanib, cabozantinib, selengatinib (thyroid only); resistance to vandetanib, cabozantinib  |
| ROS1               | IHC, RNA Fusion                           | crizotinib, ceritinib, entrectinib, lorlatinib (NSCLC only)  |
| TMB                | DNA Mutation                              | pembrolizumab  |

**IHC:** Immunohistochemistry    **CISH:** Chromogenic *in situ* Hybridization    **CNA:** Copy Number Alteration (DNA)

**HRR (Homologous Recombination Repair) genes:** ATM, BARD1, BRCA1, BRCA2, BRIP1, CDK12, CHEK1, CHEK2, FANCL, PALB2, RAD51B, RAD51C, RAD51D, RAD54L

Note: in certain instances, some biomarkers included in Mi Profile or genes ordered individually will not associate with commercially available cancer therapies or clinical trials.

# Biomarker Analysis by Tumor Type

The information below details the biomarkers analyzed by technology for the tumor type submitted. Before ordering testing services, please refer to the profile menu online ([www.CarlsMolecularIntelligence.com/profiling-menu](http://www.CarlsMolecularIntelligence.com/profiling-menu)) to view the most up-to-date listing of biomarkers that will be performed. Tests may vary if insufficient tumor samples are submitted.

| MI Profile™                        |  |                              |                                      |                                      |  |
|------------------------------------|--|------------------------------|--------------------------------------|--------------------------------------|--|
| Tumor Type                         | Immunohistochemistry (IHC)                           | Whole Exome Sequencing (WES) |                                      | Whole Transcriptome Sequencing (WTS) | Other  |
|                                    |  | DNA Alterations              | Genomic Signatures                   | RNA Alterations                      |  |
| Bladder                            | MMR, PD-L1 (SP142 and 22c3)                          | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Breast                             | AR, ER, Her2/Neu, MMR, PD-L1 (SP142, 22c3), PR, PTEN | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Cancer of Unknown Primary - Female | AR, ER, Her2/Neu, MMR, PD-L1 (SP142)                 | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Cancer of Unknown Primary - Male   | AR, Her2/Neu, MMR, PD-L1 (SP142)                     | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Cervical                           | ER, MMR, PD-L1 (22c3), PR                            | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |

| Colorectal and Small Intestinal    | Her2/Neu, MMR, PD-L1 (SP142), PTEN                   | Mutations, Indels, CNA       | MSI, TMB,<br>MI FOLFOXai™ (CRC only) | Fusions, Variant Transcripts         |  |
| Endometrial                        | ER, MMR, PD-L1 (SP142), PR, PTEN                     | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Esophageal Cancer                  | Her2/Neu, MMR, PD-L1 (22c3)                          | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         | EBER ( <i>Chromogenic in situ Hybridization</i> )  |
| Gastric/GEJ                        | Her2/Neu, MMR, PD-L1 (22c3)                          | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         | EBER, Her2 ( <i>Chromogenic in situ Hybridization</i> )                                  |
| GIST                               | MMR, PD-L1 (SP142), PTEN                             | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Glioma                             | MMR, PD-L1 (SP142)                                   | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         | MGMT Methylation ( <i>Pyrosequencing</i> )   |
| Head & Neck                        | MMR, p16, PD-L1 (22c3)                               | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         | EBER, HPV ( <i>Chromogenic in situ Hybridization</i> ), HPV reflex to confirm p16 result |
| Kidney                             | MMR, PD-L1 (SP142)                                   | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Melanoma                           | MMR, PD-L1 (SP142)                                   | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Merkel Cell                        | MMR, PD-L1 (SP142)                                   | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Neuroendocrine                     | MMR, PD-L1 (SP142)                                   | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Non-Small Cell Lung                | ALK, MMR, PD-L1 (22c3, 28-8 and SP142), PTEN         | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Ovarian                            | ER, MMR, PD-L1 (22c3), PR                            | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Pancreatic                         | MMR, PD-L1 (SP142)                                   | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Prostate                           | AR, MMR, PD-L1 (SP142)                               | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Salivary Gland                     | AR, Her2/Neu, MMR, PD-L1 (SP142)                     | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Sarcoma                            | MMR, PD-L1 (SP142)                                   | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Small Cell Lung                    | MMR, PD-L1(22c3)                                     | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Thyroid                            | MMR, PD-L1 (SP142)                                   | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Uterine Serous                     | ER, Her2/Neu, MMR, PD-L1 (SP142), PR, PTEN           | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         | Her2 ( <i>Chromogenic in situ Hybridization</i> )  |
| Vulvar Cancer (SCC)                | ER, MMR, PD-L1 (22c3), PR                            | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |
| Other Tumors                       | MMR, PD-L1 (SP142)                                   | Mutations, Indels, CNA       | MSI, TMB, LOH                        | Fusions, Variant Transcripts         |  |

**MI FOLFOXai™:** AI predictor of FOLFOX response in metastatic colorectal adenocarcinoma.

**MMR = Mismatch Repair proteins: MLH1, MSH2, MSH6, PMS2**

# Next-Generation Sequencing Gene List

| Whole Exome Sequencing – Genomic Stability Testing (DNA)                                  |        |         |                                |        |        |                               |         |                           |  |  |  |  |  |  |
|---|--------|---------|--------------------------------|--------|--------|-------------------------------|---------|---------------------------|--|--|--|--|--|--|
| Microsatellite Instability (MSI)  |        |         | Tumor Mutational Burden (TMB)* |        |        | Loss of Heterozygosity (LOH)* |         |                           |  |  |  |  |  |  |
